

CAREVA Platform Knowledge Info

This document contains essential information regarding Careva's features, usage, transactions, and support protocols.

1. Using Mental & Physical Health Services

Careva provides unified support through two dedicated tabs: AI Doctor (Physical Health) and AI Therapist (Mental Health).

The AI Doctor (Physical Health Advice)

The AI Doctor is designed for fast, text-based general medical information and preliminary diagnostics.

Purpose: Provides non-emergency, general medical advice, symptom checker, and health information. It is not a substitute for a human doctor or emergency care.

Input Types:

- Text: Type your symptoms or health questions directly into the chat field.
- Voice: Tap the microphone icon (if available) to use Groq Whisper STT (Speech-to-Text) technology for quick, hands-free input.
- Image Input: For preliminary analysis of visible issues (e.g., skin conditions, rashes), use the image upload feature. The AI Doctor can use its multimodal capabilities to provide feedback on the image content.

Output: Responses are delivered as text and often paired with audio using ElevenLabs TTS (Text-to-Speech) for convenience.

The AI Therapist (Empathetic Mental Health Support)

The AI Therapist offers nuanced, empathetic, and confidential support for mental and emotional well-being.

Purpose: Provides guidance, coping strategies, mindfulness exercises, and a non-judgmental space for emotional processing. It is not a substitute for human therapy or crisis intervention.

Usage: Speak naturally about your feelings, stress, or any mental health concerns.

Safety and Crisis Detection: The AI Therapist includes a critical safety tool leveraging Twilio services. If the conversation indicates a severe mental health crisis, immediate crisis resources and contact information will be provided, and necessary emergency safety protocols will be initiated.

Confidentiality: All conversations are treated with strict confidentiality.

2. Managing Transactions and Payments

Careva aims to provide a simple and secure process for managing your health expenses, subscriptions, and reward earnings.

Viewing Records: All records of payments, subscriptions, and services rendered are accessible under the 'Account' or 'Transactions' tab within the application.

Making Payments: Payments for premium features or specialized consultations can be made securely using standard payment methods (credit card, digital wallet). Follow the on-screen

prompts for processing.

Security: Careva uses industry-standard security protocols to ensure the integrity and safety of all financial information and transactions.

Referral Reward System

Careva rewards users for sharing the benefits of the platform with friends, family, and colleagues.

How it Works:

- Find your unique Referral Code in the 'Referrals' section of the app.
- Share this code with others.
- When a referred person signs up using your code AND completes their first qualifying action (e.g., a premium subscription payment), both you and the referred user will receive a reward.

Rewards: Rewards typically include credits for premium features, discounts on future subscriptions, or direct cash rewards, depending on current promotions. Details on current rewards are available in the 'Referrals' section.

3. Resolving Payment and Transaction Issues

If you encounter any difficulty with a payment, subscription charge, referral reward payout, or have a question that the AI assistant cannot fully resolve, please follow the defined support procedure.

Reporting Transaction Issues

To ensure the fastest possible resolution for any payment discrepancy or transaction error, you must use the dedicated support email address and include specific evidence.

Action Required: Please send an email to support@careva.health or WhatsApp to 8975663002.

Essential Information: Your email must include the following details:

- Subject Line: Clearly state 'Transaction Issue - [Brief Description of Problem]'.
- Proper Transaction ID: Provide the full, accurate Transaction ID or Order Number associated with the issue.
- Proof of Transaction: Attach clear supporting documentation or proof, such as a screenshot of the bank charge, the payment receipt, or the error message.

General Support

If you have a question about usage, features, or any other general inquiry that this knowledge base or the AI assistant cannot answer, please feel free to:

Contact Support: Send a detailed email to support@careva.health. Our human support team will investigate and follow up with you directly.

Disclaimer: The Careva AI Doctor and AI Therapist provide informational and supportive advice only. They do not replace professional medical diagnosis, treatment, or licensed human therapy. In a medical or mental health emergency, always contact local emergency services immediately.
